

LECICHOINE PC50 Concentrated phosphatidylcholine fraction

NOVASTELL
Z.I. de la Porte Rouge
27150 Etrépany - France

Novastell is the French leading company for innovative active ingredients based on phospholipids and omega 3 fatty acids. Our portfolio is composed of up to date products coming from various origins: GMO-free soya, sunflower, rapeseed, egg and marine phospholipids concentrated in DHA, vegetal phosphatidylserine (free and encapsulated) and phosphatidic acid.

Phosphatidylcholine is the main component of cell membranes, an active ingredient for liver protection, a physiological carrier for choline and a hypocholesterolemic nutrient. It also has the property to protect the walls of the digestive tract against the side effects of aggressive drugs and to enhance the bioavailability of other actives.

The use of phosphatidylcholine in food supplements or in pharmaceutical grade products, needs greater concentrations than those naturally found in vegetal lecithins. Reaching these high concentrations requires to the of high-tech processes.

In addition to the classic qualities fluid or powder with contents ranging from 20 to 35%, Novastell now proposes a concentrated fraction with 50% phosphatidylcholine. This waxy product can be incorporated in food supplements or formulated as an active emulsifier in liquid formulations.
