NOVASTELL
Z.I. de la Porte Rouge
27150 Etrépany - France

Novastell is a French company specialized in lecithins, phospholipids and omega 3 fatty acids.

Novastell offers phospholipid-based nutritional ingredients, ready to use formulations and semi-finished products.

Some molecules have a poor intestinal assimilation which impairs their availability and efficacy. Scientific studies have shown that the presence of lecithin is able to increase their intestinal assimilation of actives after an oral supply.

The active ingredient and the phospholipids must be provided at the same time to obtain a more homogenous dispersion in the digestive tract and an improved crossing of the intestinal barrier.

VECTOCHOLINE is specifically intended to the vectorization of your active ingredients.

This concept covers not only the supply of a specific phospholipid extract but also the know-how to combine it with your actives to create a new, more bioavailable and more efficient ingredient through tailor-made formulas.
