Novastell is a French company specialized in phospholipids and omega 3 fatty acids.

Novastell offers phospholipid-based nutritional ingredients, with a special emphasis on the physiological activity of phospholipid and DHA complexes which allow a high assimilation and an optimal biaccretion of DHA in cell membranes.

Novastell proposes ready to use formulations available as bulk and semi-finished products.

Phosphatidylserine, the "brain phospholipid" is essential to the physiological functioning of nervous cells. It has been shown that the phosphatidylserine content of the brain decreases with aging and that this diminution follows the alteration of cognitive performances.

A food supply of phosphatidylserine can counteract this evolution and slow down the alteration of memory and learning during aging.

Novastell's range of products includes phosphatidylserine both in the form of active ingredients from soya and sunflower origins, and ready to use formulations and semi finished products

BIOCAPS SUN PS is the first hydrodispersible form of phosphatidylserine available.

It is composed of an encapsulated phosphatidylserine from sunflower origin, and thus devoid of any allergenic risk.

BioCaps Sun PS contains 20% sunflower PS.

It is presented as a free flowing powder that can be incorporated in liquid or powder formulations.
