

PHOSPHOLIPIDS FOR LIFE

NOVASTELL
ESSENTIAL INGREDIENTS

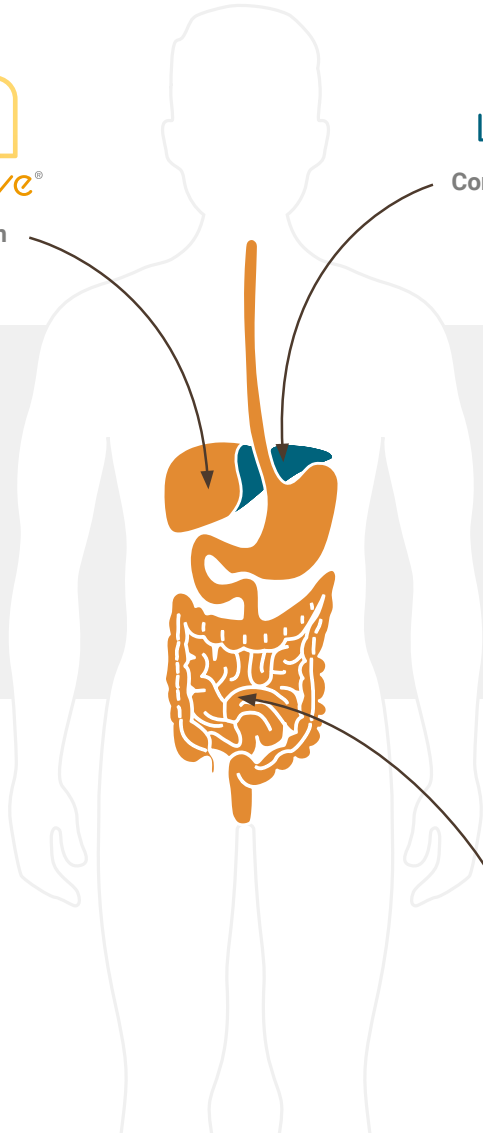

Gut-Liver Nutrition

Optimises gut & liver health

Cholinactive®
Liver protection

Lecimarine®
Controls inflammation

Cholinactive®
Gut protection

Gut-Liver Nutrition

Offering a natural protection and optimisation of the gut

Cholinactive®
for gut protection

Phosphatidylcholine is the main protection of the gut mucosa against the invasion of the gut wall by pathogen microorganisms. A food supply of phosphatidylcholine reinforces the integrity of mucus and help to maintain its efficiency. Cholinactive® range proposes concentrated phosphatidylcholine, up to 90%, from soy and sunflower.

Lecimarine®
for the control of inflammation

DHA is the precursor of strong anti-inflammatory molecules named resolvins, which prevent the liver developing lifestyle pathologies. Lecimarine® provides DHA in the form of phospholipids, the most bio-available and active form within human cells. It ensures a better incorporation into tissues.

Cholinactive®
for liver protection

Liver plays a central role in human metabolism based on methyl group and choline availability. As the only storage form of choline, phosphatidylcholine is an essential nutrient for liver and its food supply is key. Phosphatidylcholine is also able to drain lipids out of the liver, preventing steatosis (NASH) and its evolution in non reversible degeneration forms of the liver.
